

Deep Query Ask - Case Management

Prepared By: Kamal Suthar

Course : Salesforce Business Analyst

Salesforce Business Analyst | End-to-End Case Management Implementation.

Project Name	<i>Deep Query Ask - Case Management</i>
Company	TheSmartBridge
Trainer	Mr. Mir Abdul Rehman
Platform	Salesforce Service Cloud
Document Type	Business Requirements + Functional Implementation Guide

1. Executive Overview

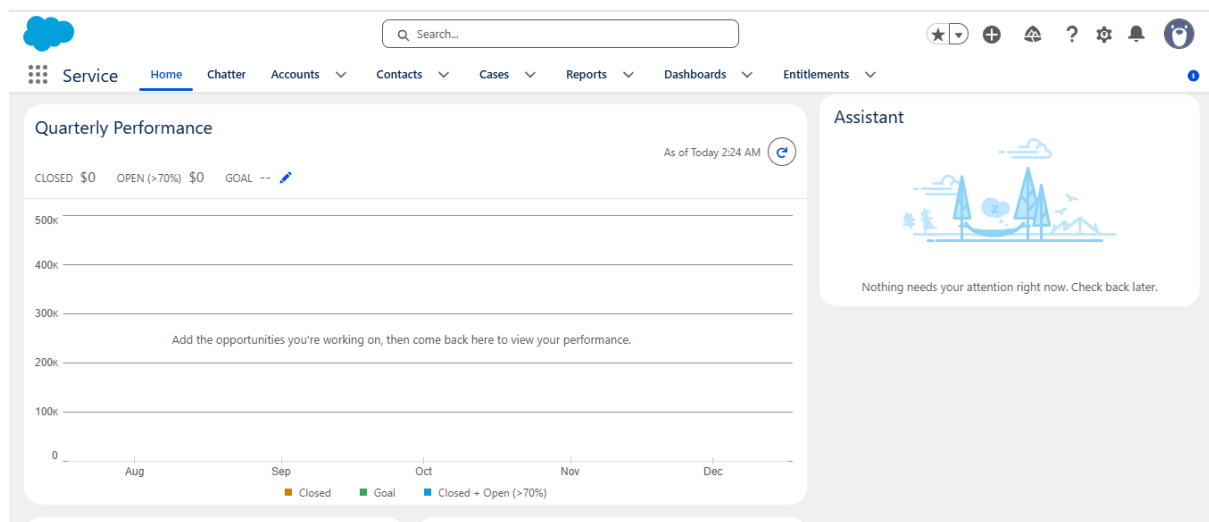

This project establishes a standardized Salesforce Service Cloud case-management process that centralizes customer issues, automates routing, tracks service-level commitments, supports web and email intake, and provides operational reporting.

Manual, decentralized handling through spreadsheets, personal email inboxes, and phone logs.	A unified Salesforce case repository with defined lifecycle, queues, automation, SLA tracking, and dashboards.	Improved visibility, workload distribution, response discipline, escalation control, and management reporting.
--	--	--

Project Objectives

- Centralize customer case intake across supported channels.
- Automatically assign cases to the appropriate support queue using business criteria.
- Define a controlled case lifecycle using a Support Process and agent Path.
- Track response and resolution commitments with Entitlement Management and Milestones.
- Provide operational dashboards for open work, SLA performance, and ownership analysis.

Standard Objects Mapped

- Account: Customer Organization / Enterprise Entity
- Contact: Individual Customer / Point of Contact
- Case: Central Support Ticket / Inquiry
- Case Comment: Operational Communications & Agent Notes
- Case History: System Audit Trail & Field Changes
- Entitlement & Milestone: SLA Enforcement & Timer Tracking

Business Requirements Document (BRD)

1. Project Background & Current State (AS-IS)

The organization currently manages customer complaints, issues, and inquiries through manual, decentralized tools—primarily spreadsheets, personal email inboxes, and phone logs.

- **Lack of Visibility:** Support leadership and team members have no single pane of glass into case statuses, queue depths, or overall turnaround times.
- **Manual Workflows:** Agents track incoming inquiries and follow-ups by hand, creating redundant efforts and uneven workload balancing.
- **Missing SLA Mechanisms:** Service Level Agreements (SLAs) are neither enforced nor tracked; there is no automated alert when customer issues become overdue.
- **Poor Customer Experience:** Customers must contact support multiple times to check issue progress due to lack of automated status communications.

2. Business Objectives & Future State (TO-BE)

The primary goal is to deploy Salesforce Service Cloud to standardize and automate case management across channels.

- **Centralize Case Intake:** Ingest issues from multiple inbound touchpoints into a unified repository.
 - **Automated Assignment:** Eliminate manual sorting by routing incoming requests dynamically using business criteria.
 - **Enforce Resolution SLAs:** Track key support milestones and enforce escalations to prevent breaches.
-
- **Data-Driven Operations:** Leverage real-time dashboards to measure agent efficiency, queue capacity, and customer health.

3. Project Scope

In Scope

- Multi-channel case intake via Email-to-Case and Web-to-Case.
- Case Assignment Rules based on case categorization (Type, Priority).
- Case Lifecycle Management (Status transitions, validation rules).
- SLA and Milestone tracking using Salesforce Entitlements.
- Case Escalation Rules for at-risk tickets.
- Support operations reports and executive dashboards.

Out of Scope

- Computer Telephony Integration (CTI) / Telephony dialer integrations.

- Artificial Intelligence/Chatbot support (Agentforce / Einstein Bots).
- ERP, billing systems, or third-party transactional system integrations.
- Self-service Knowledge Base automation (reserved for future release phases).

4. Stakeholders & Persona Matrix

Property Manager	Property operations, accounts, complex inquiries	Visibility over assigned accounts and escalations
Maintenance Agent	Technical/mechanical case tickets and service work	Rapid case updates and status tracking
Finance Analyst	Rent, invoices, structural/billing issues	Dedicated queue access for billing-related work
Support Executive / CEO	Executive oversight and service metrics	Aggregated dashboards and SLA violation metrics

Functional Requirement Highlights

FR - 01	Data Mode	Track Accounts, Contacts, and Cases	High
FR - 02	Intake	Inbound support emails create Case records and associated Tasks	High
FR - 03	Intake	Public web form captures tickets and routes them into Salesforce.	High
FR - 04	Assignment	Route inbound cases automatically to users/queues based on business criteria.	High
FR - 05	SLA / Escalation	Monitor milestones through Entitlements and flag SLA violations	High

3. Solution Architecture & Data Model

The solution uses Salesforce Case as the central work record, supported by Account, Contact, Entitlement, and CaseMilestone data structures. The source BRD describes Case as the end-to-end record for customer issues, inquiries, and complaints, while Entitlement and CaseMilestone support service-level tracking.

Customer	Web-to-Case / Email-to-Case	Capture inbound customer requests from web forms and email
Case Management	Case Object	Single record for issue tracking, ownership, status, priority, origin, and reason.
Work Distribution	Queue + Assignment Rule	Route cases to Order Support Queue based on configured criteria

Agent Experience	Support Process + Path	Control status values and expose Priority / Case Reason at key stages
SLA	Entitlement Process + Milestones	Measure response and resolution targets and support escalation management
Automation	Record-Triggered Flow	When a Case becomes Escalated, send a customer notification
Analytics	Reports + Dashboard	Monitor open workload, SLA breaches, and cases by owner.

Key Case Data Fields

Origin	identifies the intake channel	Web / Email
Status	Controls lifecycle stage	New / Working / Escalated / Closed
Priority	Indicates urgency	Used in agent Path and escalation analysis
Case reason	Captures business reason	Displayed on the Case Path
Owner	identifies responsible user or queue	Identifies responsible user or queue
SLA / Milestone	Tracks service commitments	First Response 2h / Resolution 18h

SALESFORCE CASE MANAGEMENT IMPLEMENTATION

The following ten steps present the project configuration in simple format, keeping the same sequence and practical setup approach.

STEP 1: Create Queue - Create Team

Setup > Search Queues > New Queue

- Label: Order Support Queue
- Object: selecte Case
- Members: Shift Available Users to Right side > Save

The screenshot shows the Salesforce Setup interface. In the left sidebar, 'Queues' is selected under the 'Users' section. The main content area displays the 'Order Support Queue' configuration page. The queue is labeled 'Order Support Queue' and has a queue name of 'Order_Support_Queue'. The supported objects are set to 'Case'. The queue description is 'Case'. The created by is 'Kamal suthar' on 9/15/2026 at 1:17 AM. The modified by is 'Kamal suthar' on 9/18/2026 at 2:31 AM. Below the configuration details, there is a table of users assigned to the queue:

Name	Type
Integration User	User
Security User	User
Kamal suthar	User
kamlesh vama	User

STEP 2: Web-to-Case - (Website to Case)

Setup > Search Web-to-Case > Tick Enable Web-to-Case > Save

- click Generate Web-to-Case HTML
- Field > Contact Name, Email, Subject, Description > Generate
- Generate the HTML and save it as an .html file
- Open it in a browser and submit a test form.
- Verify that a Case is automatically created

The screenshot shows the Salesforce Setup interface. In the left sidebar, 'Web-to-Lead' is selected under the 'Web-to-Case' section. The main content area displays the 'Web-to-Lead' configuration page. The page includes a form for generating the HTML code, with fields for 'First Name', 'Last Name', 'E-mail', and a 'SUBMIT' button. Below the form, there is a 'Web-to-Lead Settings' section with the following options:

- Web-to-Lead Enabled: ☒
- Require reCAPTCHA Verification: ☐
- Default Lead Creator: OrgFarm EPIC
- Default Response Template:

STEP 3: Case Assignment Rule

Setup > Search Case Assignment Rules > New

- Name: Auto Assign to Order Team
- Check Active > Save
- Rule Entries > New
- Condition: Case: Case Origin EQUALS Web
- Assign to: Queue - Order Support Queue > Save

The screenshot shows the Salesforce Setup interface. The left sidebar has a search bar with "Case Assignment Rules" and a list of categories: Feature Settings, Service, and Case Assignment Rules (highlighted). The main content area is titled "Case Assignment Rules" and includes a "New" button. Below the title is a table with columns: Action, Rule Name, Active, Created By, and Created On. The table contains two rows: "Auto Assign to order Team" (Active: checked) and "Standard" (Active: unchecked).

Action	Rule Name	Active	Created By	Created On
Rename Del	Auto Assign to order Team	☒	Kamal suthar	9/15/2026
Rename Del	Standard	☐	OrgFarm EPIC	8/31/2026

STEP 4: Set Status Process

Setup > Search Support Processes > New

- Name: Order Management Process
- Status (4 status) : New, Working, Escalated, Closed > Save

The screenshot shows the Salesforce Setup interface. The left sidebar has a search bar with "Support Processes" and a list of categories: Feature Settings, Service, and Support Processes (highlighted). The main content area is titled "Support Processes" and includes a "New" button. Below the title is a table with columns: Action, Support Process Name, Description, Active, and Modified By. The table contains one row: "Order Management Process" (Active: checked).

Action	Support Process Name	Description	Active	Modified By
Edit Del	Order Management Process	This process manages the complete lifecycle of customer order-related cases from creation to resolution, including escalation handling for SLA compliance.	☒	Kamal suthar 9/16/2026, 9:37 AM

STEP 5: Select the Path for Agent

Setup > Search Path Settings > Enable > New Path

- Object : Case,
- Process: Order Management Process,
- Field: Status
- Add 2 field in Path : Priority and Case Reason > Save > Active

The screenshot shows the Salesforce Setup interface. The left sidebar has a search bar with 'Path Settings' entered and a 'User Interface' section with 'Path Settings' highlighted. The main content area is titled 'Path Settings' and includes a 'New Path' button. Below the button is a table with the following data:

Path Name	Active	Object	Record Type	Action
Order Support Path	☒	Case	--Master--	Delete Edit Deactivate

STEP 6 : SLA

Setup > Entitlement Settings > Enable Entitlement Management

Setup > Entitlement Processes > New Process

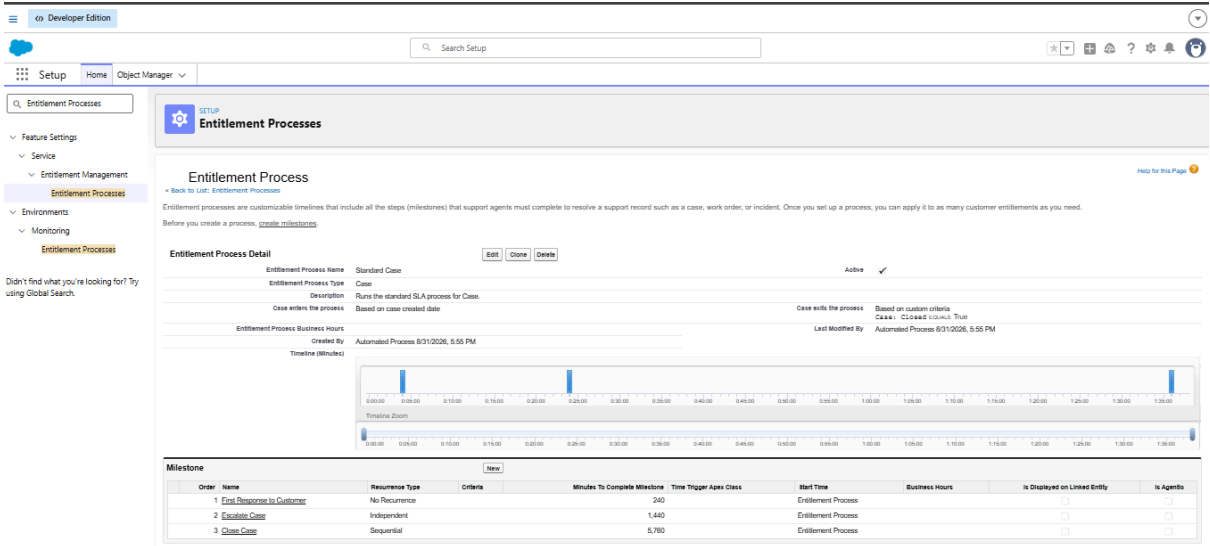

- Name: Standard 24Hr SLA, Entry

Criteria : *Case: Status EQUALS New,

*Exit: Status EQUALS Closed > Save

Create New Milestone :

- **Milestone 1:** Name First Response, Target Time 240 min
- **Milestone 2:** Name Resolution Time, Target Time

Setup > Search Email-to-Case > Continue > Routing Addresses > New

- Routing Name: Support Email
- Email Address: sutxxxxxxxxxxxxx@gmail.com
- Save & Verify
- Send a mail on that Email , Case is auto created

Developer Edition

- Setup**
- Home
- Object Manager

STEP 9: Auto-Notification Flow

Setup > Flows > New Flow > Record-Triggered Flow

- Object: Case,
- Trigger: When record is updated,
- Condition: Status EQUALS Escalated
- Action: Send Email Alert > Customer received Mail "Your case is escalated"
- Save & Active

STEP 10 : Report & Dashboard - Final Impression

Reports > New Report > Cases > Save 3 Reports:

1. My Open Cases
2. Breached SLA Cases
3. Cases by Owner

Dashboard > New Dashboard > Add this three Reports with Chart > Save

Final Validation :

- Service Cloud is enabled.
- Order Support Queue is created with the required member.
- Case Assignment Rule is active.
- Order Management Process contains New, Working, Escalated, and Closed.
- Case Path contains Priority and Case Reason.
- Standard 24Hr SLA contains 2-hour First Response and 18-hour Resolution milestones.
- Web-to-Case and Email-to-Case have been tested.
- Escalation Flow is active.
- Three reports and the final dashboard are available.
